T-BERD/MTS 2000v2 Base Unit

New functionalities

- Management of VIAVI common workflow and data models when syncing .json OTDR test results to StrataSync
- TestPRO Loopback functionality for automated and guided loopback bidirectional OTDR measurement

OTDR

Improvements

- FTTH-SLM Assistant :
 - First page gives access to custom and pre-defined configuration files with various PON topologies
- Fix the issue related to the duplication of .pdf report files
- Add average loss of the OTDR measurement in the test reports (.pdf)
- Improve the auto-pulse configuration of the MA3 OTDR module in FTTH-SLM
- Improve launch cable management

TestPRO

Improvements

- MA2 OTDR now compatible with TestPRO
- Add “Analysis” menu in the setup especially used to change the distance unit
- Improve the display in the SmartLink map view of the “non-distributed” events
- Improve consistency between the setup information of the application and the generic Bellcore information
- Add slope measurement results in the different reports (.pdf, .txt, .json)

FiberComplete

Improvements

- Fix the issue related to the ability to save the current setup when the device is switched off and on
- Add IL/ORL pass/fail thresholds in FiberComplete .pdf report
